Why Choose Plasma Pen?

Compelling Clinical Outcomes

Plasma Pen helps spectacularly improve skin tone, brightness, laxity and texture and spectacularly lifts and tightens loose skin. The extensive dermal and epidermal re-modelling we stimulate (which includes neocollagenesis, neoelastogenesis and neoepithelialisation) leads to a dramatic reduction/elimination of photoageing and superficial wrinkles, the partial to complete elimination of medium-depth wrinkles and a marked improvement, plumping and softening of deep wrinkles.

Rapid Treatment & Healing

With rapid treatment sessions possible thanks to our unique nano-probes, our super-efficient plasma delivery system and exclusive access to all the best pre and post treatment products and treatment delivery enhancers then, with Plasma Pen, aftercare is simple and effective. There are little or no untoward side-effects or pain and our technicians are able to offer a huge array of next-generation treatments, all with the shortest downtimes, the fastest recovery and long-lasting, optimal results.

Immediate, High-Impact Results

Plasma Pen is a highly versatile, non-invasive and non-surgical treatment where results are practically immediate (permanent in some cases) and generally last up to 3 years in others – all with no blood, no open wounds, no suturing, no scalpels, no cutting of the skin, no injectable anaesthetic, no heavy ablation, no excessive collateral thermal injury, no chemicals, no thinning of the skin, no complications and ultimately no need for costly and invasive surgery.

Safe, Cost-Effective & Natural

Our device, pioneering treatments and unique ability to always work safely at a predictable depth of tissue injury leaves natural and younger looking skin – especially compared to laser, dermabrasion and chemabrasion, which can leave the skin light, pigmented and shiny. Plasma Pen is especially effective in eyelid tightening and eyelid hood reduction and is one of the only safe treatments for 'blepharoplasty' outside of surgery. It is enormously cost-effective compared to the alternatives.
